Thames River Anglers Association

In the spring of 1986 the TRAA was formed by anglers concerned with the state of the fishery in the Thames River watershed, particularly the dwindling smallmouth bass population in the North Thames River. The TRAA is not a fishing club, although most members are anglers and share fishing as a common interest. We are a "hands on" environmental group who likes to work at a grass roots level.

WATERSHED

Watershed to: protect, enhance and regenerate a viable, multi-species, year-round fishery participate in environmental rehabilitation.

STEELHEAD

Freshwater forms that have been introduced into the Great Lakes and migrate into tributaries to spawn are also called steelhead. Watershed

ADULT FISH

Adult fish are distinguished by a broad reddish stripe along the lateral line, from gills to the tail, which is most vivid in breeding males.
